

Crystal Reports

Expert

This one day course will allow delegates to work intensively with Crystal Reports.

Delegates will gain an in depth understanding of Crystal reporting and how to create complex formulas, use custom functions, use sub-reports and gain a thorough understanding of report processing.

PREREQUISITES

To be successful, delegates who attend this course should have attended the Advanced Course.

Delegates must also have a working knowledge of

- Basic database concepts
- Knowledge of the concepts taught in the associate level courses

COURSE CONTENT

Report Processing

- Use multi-pass reporting
- Use evaluation time functions
- Use a dynamic array

Using Subreports

- Defining subreports
- Creating an unlinked subreport
- Creating a linked subreport
- Creating an on-demand subreport
- Using shared variables in a subreport
- Using subreports to link "unlinkable" data

Creating Complex Formulas

- Creating complex formulas
- Using loop control structures
- Using arrays functions and loops
- Using nested functions

Using Custom Functions

- Creating custom functions
- Using custom functions
- Modifying custom functions
